Isolations-Indizes für $n=4$:

x	y	z	w	
0	5	9	10	x
	0	12	9	y
		0	7	z
			0	w

$$\alpha_{xy|wz} = \frac{1}{2} \left[\max \begin{cases} d(x,y) + d(w,z) \\ d(x,w) + d(y,z) \\ d(x,z) + d(w,y) \end{cases} - (d(x,y) + d(w,z)) \right]$$

$$= \frac{1}{2} \left[\max \{ 12, 22, 18 \} - 12 \right] = 5$$

$$\alpha_{xz|yw} = \frac{1}{2} [22 - 18] = 2 \quad \alpha_{xw|yz} = \frac{1}{2} (22 - 22) = 0$$
